- PowerShell actions and activities
- Terminal emulation actions and activities

*Operations Console

Automate Enterprise Ops Console provides the ability to monitor and manage everything that happens across an organization from anywhere. The Ops Console allows users to make better and faster strategic decisions by providing detailed operational analytics and the ability to control your processes from any device.

SLA Management

Ensure critical SLAs will be met by being able to access reports and management of your processes from anywhere.

Single Pane of Glass

Central view of upcoming, active and completed items, with the ability to drill down into the specifics of any process or workflow in your configuration. This flexibility helps to ensure that potential problems can be diagnosed anywhere, from any device.

Mobilized and Responsive

View processes and run, stop, pause, resume, enable or disable any action from a mobile device. Web-based, responsive interface allows users to take action immediately, from anywhere, if potential issues arise regarding workflows, missing files, etc.

Customizable User-Interface

User-defined dashboards give your deeper insights into operations across your organizations. Sort and filter agent lists, view agent metrics, and monitor agent activity down to the step level.

For More Information

Call us at 866-366-2099 or email solutions@ylconsulting.com to set up a personal consultation. We'll review your current setup and see how Automate solutions can help you achieve your IT and business process automation goals.
